

Task Lighting

Phantom™ Elite TL Series LED light strips are designed for any linear task or under-cabinet lighting application and represent a breakthrough in strip lighting technology. Perfect for kitchens, offices, desks, or counter tops, these low profile task lights are easily concealed regardless of the cabinet design, giving new definition to the phrase, “See the Light, Not the Fixture.”

Custom mounting trims establish the optimum aiming angle which allows the contents of any area to be illuminated to a precise degree at the highest level of aesthetics yet to be seen. Strips are precut to any desired length to be custom fitted for continuous under-cabinet lighting. Strips are dimmable using a magnetic low voltage dimmer and produce a quality of consistent color and lumen output unmatched by competing products.

PHANTOM ELITE TL SERIES FEATURES

- Low profile, concealed linear LED lighting source designed for any under-cabinet lighting application
- Excellent assortment of power connectors, jumpers, and accessories for ease of installation
- Dimmable high-performance compact magnetic low-voltage 24VDC drivers (available in both 120V and 277V)

Elite TL Series Exploded View

LIGHTING STRIP LOCATION

For best results, always mount the lights behind the front lip of the upper cabinet and use a matte finish on the back of the cabinet or wall to minimize glare and reflections. Note: stone finishes, such as granite, marble, and ceramic tile are notorious for reflecting lamp images from normal viewing angles.

LIGHTING STRIP TIP

It may be necessary, depending on the trim used, to field adjust lighting strips up or down with a shim to accommodate larger wood reveals and fine tune lighting coverage to the edge of the countertop.

LED LIGHTING STRIP

Each LED lighting strip is concealed by either a trim or a lensed enclosure. For best results, use a matte finish on the back of the cabinet to minimize reflections and/or glare.

WIRE SLEEVE TIP

We recommend that you fabricate a small removable wood cover for the purpose of hiding the wires between the fixture and where the wire exits the wall. Most applications require an end feed connection.

DRIVER (REMOTE MOUNT)

Magnetic drivers are sized to match the total wattage of your lighting load and come equipped with one or more secondary circuit breakers. (See driver sheet for more sizing information and amperage calculations).

DIMMER CONTROLS (BY OTHERS)

Magnetic low voltage transformers should always be used with a dimmer designated for magnetic or inductive loads. Electronic transformers should always be used with a dimmer designated for electronic loads.

SHIELDED

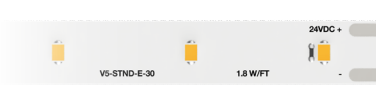

Trim Profiles

Shielded options are best for shaping the light in precise patterns and for minimizing hot spots on surrounding surfaces and spill light that may stray outside the display.

Our most popular shielded trims for under cabinet task lighting are trims 1 and 2. Both shielded trims are great for applications that have a under cabinet reveal as they provide the best light distribution and glare control. Trim 3 is perfect for cabinets that have no reveal and can be installed and painted to match the cabinet color. For lensed trims, we recommend trim 6 and 9 for the ultimate in light distribution to hide the LED diodes and provide total diffusion to prevent reflected glare from tile, granite, marble, stainless steel or gloss finishes. **See page 3 for lensed trim options.**

LENSED

Trim Profiles

Lensed options are the best for applications where the light fixture may be visible, by hiding the individual LED diodes and preventing object or surface reflections by homogenizing the light pattern.

ELITE TAPE SPECIFICATIONS FOR LENSED TRIM PROFILES

TERMS AND CONDITIONS

To comply with Phantom™ Lighting System warranty policies and ETL standards, all lighting strips must be used in conjunction with Phantom™ Lighting drivers. All Phantom lighting transformers are ETL Approved for Class 2 applications and are strongly recommended for proper orientation of lighting strips. Phantom™ drivers should **not** be located in areas without ventilation or be subjected to high ambient temperatures. If ambient temperatures exceed 115°F (46°C) around the driver, the circuit breakers may nuisance-trip due to excessive heat and void any warranty.

CAUTION: Failure to correctly size primary and secondary conductors and/or overload protection may result in bodily injury or serious property damage.

If you have any questions or concerns regarding your application, please contact the factory at (713) 863-1184 or consult a licensed electrician or the National Electric Code.
